

OUR PRODUCT

Tested, Proven, Reliable

The Equivizor fly mask was designed and produced in Australia and was found to be highly effective when tested by local horse owners. This product is now available in the UK and Ireland. **The innovative design of the EQUIVIZOR fly mask also helps to avoid light-induced Head Shaking!**

The mask stays off the horse's eyes

- 3 strategically located darts create a cantilever to lift the mesh
- Soft EVA lining shades the eyes
- Highly ventilated for maximum comfort
- UV proof PVC mesh for maximum UV protection

Reliable, snugly fit

- Adjustable Velcro closure under the chin
- Two additional, adjusting straps
- Well covered opening for mane to stick out
- Nose flap cushioned with soft EVA to stay stable in wind and to protect against sun and UV

Available in four variations

- With nose and ear protection
- With nose protection
- With ear protection
- Standard

Fly Mask

The mask flies learned to hate

No Way In !!

The main task of any fly mask is to not let any flies in, This can only be assured by a design that shows no openings – even when the horse is moving its head abruptly and heavily.

The EQUIVIZOR Fly mask was designed in Australia – in the land that knows even the most aggressive of flies, trying to make use of even the smallest opening to get in. The EQUIVIZOR Fly mask was designed to deprive flies of any chances.

The Velcro closure under the chin and the additional straps with adjustable fast release closures ensure an excellent fitting

The mask with ear protection allows a wide but covered and tight opening for the horses' mane.

Tell head shaking good-bye !

Shadowing protects the eyes

Three strategically located darts create a cantilever to lift the EVA liner and the outer mesh. The EVA lining acts as a barrier against the heat of the sun while promoting a sustainable level of air flow around the eye region. This soft EVA lining prevents laceration of the cornea, insulates the forehead and shades the eyes. This way, light-induced head shaking is prevented. Naturally, only UV proof mesh is used in the construction of the mask. Additional holes in the EVA allow excellent ventilation.

The inside of the nose flap is strengthened with EVA aswell. This ensures the flap does not lift in stronger winds and additionally, the horse's nose is protected from sunburn and UV- rays.

Lord of the flies!

Prevent your horse from being tortured

The EQUIVIZOR fly mask is Available in four different styles.

- Standard
- With ear protection
- With nose protection
- With ear and nose protection

These masks come in a range of sizes

- Foal
- Pony

"I bought one for my old pony, Genie, who suffers from uveitis and struggles in bright sunlight. Although she has had special masks before, the design of this one is great as the visor really does significantly reduce the amount of light that enters her eyes. She comes in from the field feeling and looking much more comfortable. The mask is fully adjustable and so fits very nicely too." **By Rhona S.**
