

Now Available in the UK and Ireland!

EQUIVIZOR Recovery

The EQUIVIZOR Recovery protects the horse's eyes efficiently after ophthalmology and when suffering from eye diseases its tinted version is also qualified to protect against UV-rays.

The Recovery mask is made from clear PVC the unique design allows sufficient space in front and around the eyes.

Its 3 strategically located straps allows for a secure fit along with the soft padding surrounding the mask for comfort.

The EQUIVIZOR Recovery has a mesh mask which can be used on top to protect against insects and provides efficient shading.

Recovery

The EQUIVIZOR Recovery!

Faster curing, reliable UV protection

The Problem:

Horses that had an ophthalmological treatment or have photosensitive eyes need reliable protection from dust, light, UV-rays, insects or any other contact without the animal being impeded in its movement and daily routine.

The Solution:

- The EQUIVIZOR Recovery is made of clear PVC.
- Its design allows sufficient space in front of and around the eyes.
- Several openings and holes ensure adequate ventilation.
- The EQUIVIZOR Recovery comes with a mesh that protects against insects and provides efficient shading.
- The EQUIVIZOR Recovery is available in a tinted version.

The Result:

The convalescence after ophthalmology and its effectiveness is increased as negative mechanical influences are precluded.

Horses with chronic eye diseases or with high photosensitivity are enabled to stay outdoors without restriction.

EQUIVIZOR Recovery!

The Equivizor Recovery Vizor design provides maximum protection to the eyes and prevents further injury during recovery from surgery.

Made of clear soft PVC its specific design gives the animal a maximum distance between mask and eyes. The holes over the nose and on the forehead ensure a convenient climate under the mask. The included mesh allows protection against UV-light and flies.

"My horse has Uveitis and had rubbed so much that she caused an ulcer on her cornea. I purchased the Recovery Mask which stopped her causing more injury as it is very strong whilst still being comfortable. Once the ulcer had healed I purchased one of the Equivizor fly masks which blocks out the UV rays - really pleased as no more visits from vet required." **By Christine G.**

Answers to all your questions!

We are always getting questions about our products in particular the recovery mask so here are a few of the common questions along with some answers to show you how unique our Recovery mask is.

How much UV protection do the masks provide?

- The EQUIVIZOR Recovery is available in a tinted version which blocks 92% of the UV rays which is the maximum blocking factor obtainable. The shading factor is 32%. In combination with the mesh it ensures maximum protection for the eyes.

Will high wind and rain be a problem when wearing this mask?

- The Recovery mask is designed to withstand the bad weather as much as the sun and UV rays. The mask is very secure due to the 3 strategically located straps which can be adjusted to provide a secure fit.

Can you ride in the Recovery mask?

- Due to its secure fit, lack of restrictions and interference to the horse you can ride in the EQUIVIZOR Recovery mask.

Does the mask come in different sizes?

- This mask comes in 5 sizes: FOAL, PONY, COB, FULL, X-LARGE/FULL
